

78. Resolver - post.ts / Mutation - updatePost()

#graphql #resolver #authentication #mutation #backend #typeorm

Update updatePost() Mutation in post Resolver

- We will update using the **TypeORM Query Builder** - typeorm.io/#/update-query-builder
- We `console.log` the `result` object to see what exactly we want to return from it (in this case `result.raw[0]`)

/resolvers/post.ts

```
@UseMiddleware(isAuth)
@Mutation(() => Post, { nullable: true })
async updatePost(
  @Arg("id", () => Int) id: number,
  @Arg("title") title: string,
  @Arg("text") text: string,
  @Ctx() { req }: MyContext
): Promise<Post | null> {
  const result = await getConnection()
    .createQueryBuilder()
    .update(Post)
    .set({ title, text })
    .where('id = :id and "creatorId" = :creatorId', {
      id,
      creatorId: req.session.userId,
    })
    .returning("*")
    .execute();

  return result.raw[0];
}
```
