13. NextJs with ChakraUI

#nextjs   #chakraui   #frontend

```
yarn create next-app --example with-chakra-ui <folder-name>
```

```
yarn add --dev typescript @types/node
```

- Cleanup _app.tsx and index.tsx to the simplest forms:

pages/_app.tsx

```tsx
import { ChakraProvider } from "@chakra-ui/react";
import { AppProps } from "next/app";
import theme from "../theme";

function MyApp({ Component, pageProps }: AppProps) {
  return (
    <ChakraProvider theme={theme}>
      <Component {...pageProps} />
    </ChakraProvider>
  );
}

export default MyApp;
```

pages/index.tsx

```tsx
const Index = () => {
  return (
      <div>Hello World!</div>
  );
};
```
